## **OUR HISTORY**

The heritage of our turbo business began in 1936 when young Cliff Garrett formed his company in a tiny, one-room office in Los Angeles. Cliff founded the company that would later become the Garrett Corporation. Number of employees, 1. Number of customers, 1. In the 1950s, it successfully added boosting a Caterpillar C9 tractor signaling the birth of automotive turbocharging.

Through names such as AiResearch, AlliedSignal, Honeywell Transportation Systems, and now Garrett Advancing Motion, the business has sustained a reputation for revolutionizing turbocharger technologies generation after generation. From the world's first turbocharged production car – the Oldsmobile Jetfire Rocket - to the first Garrett turbocharged car to win the Indianapolis 500, Garrett's industry-leading technology and patented designs are used daily for both OE and aftermarket vehicle applications.

Garrett turbocharger technology is the preferred choice for leading original equipment manufacturers including: Audi, BMW, GM, Daimler Chrysler, Mercedes, DDC, Fiat, Ford, International Truck Co, Peugeot, Renault, Saab, and Volkswagen. Top race teams in Formula 1, World Rally, American Le Mans, 24 Hours of Le Mans, Formula Drift, Global Time Attack, NHRA, Radial vs the World Drag Racing, X275, and Pikes Peak Hill Climb rely on Garrett turbo technology to keep them on the podium.

Today, our Garrett legacy in both Aerospace and automotive industries helps create some of the most innovative and high-performing turbochargers in the world that can enable a four cylinder turbocharged engine to perform like a non-turbocharged V6 engine while providing 20-40% greater fuel efficiency. Garrett's global engineering network continues to inspire technological innovation around the world.

The products contained in this catalog are performance aftermarket parts that are not legal for street use in certain states or countries, unless a type-approval/executive order has been obtained e.g. by the distributor of the product. Check with your distributor before using in any vehicle on a public road or highway. You should check with your state or applicable country authorities to find out whether these products are legal for street use in your state or country. Applicable laws may also prohibit tampering with parts or vehicle design elements affecting emissions on vehicles intended for use on public roads. You are responsible for ensuring that the use of this product complies with all applicable laws, regulations and ordinances (including, but not limited to, emission, noise, safety, and type-approval/ executive order). Any vehicle modifications using the products in this catalog are completed AT YOUR OWN RESPONSIBILITY and AT YOUR OWN RISK. A vehicle modification using these performance aftermarket products may affect or void a vehicle's warranty, operating license/registration or type-approval/executive order. You should consult your local laws, as well as the owner's manual and service manual of your vehicle. You should also contact your vehicle's manufacturer to determine what effect modifications may have on safety, warranty, performance, and other aspects of your vehicle. These products generally may be used on racing vehicles that will never be driven on public roads or highways.

J.		

### WHY CHOOSE GARRETT TURBOCHARGERS

A turbo is a high technology product that requires superior design and intensive capital to produce. It must meet severe requirements that only a world class manufacturer can achieve.

Garrett is one of the few turbocharger manufacturers that subjects our turbos to several OE qualification tests. These tests ensure Garrett produces a safe and reliable turbo for OE applications. When you buy a Garrett turbocharger you can be sure it is reliable.

On-Engine Durability - More than 1,000-hours of general turbocharger durability, is run on-engine in one of Garrett's engineering laboratories.

Gas Stand Cyclic Durability - A several hundred hour durability test is conducted on a gas stand where the turbo is run past it normal operating limits.

Compressor & Turbine Housing Containment - A compressor/turbine wheel is weakened to hub burst at a specific speed. No portion of the wheel is allowed to penetrate a containment shroud surrounding the turbocharger. A test to ensure safety. See full article at www.GarrettMotion.com

Shaft Motion - The maximum tolerances of the bearing system are tested for rotordynamic stability beyond the maximum turbocharger operating speed. This means no bearing problems and a long turbo life.

Thrust Bearing Capacity - A test that stresses the thrust bearing at extreme conditions. This test makes sure your Garrett turbocharger can tolerate the load you put it through.

Compressor & Turbine Seal - Multiple turbochargers are run on-engine under conditions designed to cause seal leakage. No significant leakage is allowed during these tests.

Heat Soakback - A turbocharger instrumented with thermocouples is taken beyond maximum operating temperature and shut down hard! Repeat the test four more times and make sure maximum temperatures stay within our strict limits to avoid oil coking or build up inside the center housing. This is particularly critical for high temperature gasoline applications.

Compressor & Turbine Performance - The entire operating range of both the compressor and turbine are mapped on one of Garrett's performance gas stands. These test cells are calibrated to strict standards to assure accuracy and consistency.

Compressor & Turbine Blade Frequencies - Garrett has strict requirements for compressor and turbine blade natural frequency. This is critical on large trims where the blade must be stiff enough to withstand potentially damaging vibrations.

Thermal Cycle - A several hundred hour endurance test that cycles the turbocharger from low temperature to glowing red every 10 minutes. To ensure a long turbo life, no cracking of the turbine housing or distortion of the heat shroud are allowed.

Rotor Inertia - A measurement made to document the rotational inertia of Garrett's compressor and turbine wheels. Garrett's turbochargers are known for their high flow / low inertia characteristics.

Shaft Critical Speed - An analytical test that ensures that destructive shaft critical speeds are well out of the turbocharger operating range. For example, large wheels may require a large shaft diameter to avoid the shaft bending critical speed.

Wheel Fatigue - Garrett will only sell compressor or turbine wheels that have passed a cyclic fatigue test. Garrett runs tests on a regular basis to ensure quality and to constantly improve our products.

Turbo Vibration - The entire turbocharger is vibrated and monitored on Garrett's large shaker table to ensure product durability.

Engine power is proportional to the amount of air and fuel that can get into the cylinders. All things being equal, larger engines flow more air and as such will produce more power. If we want our small engine to perform like a large engine, or simply make our larger engine produce more power, our ultimate objective is to deliver more air into the cylinder. By installing a Garrett turbocharger, the power and performance of an engine can be dramatically increased.

### HOW DOES A TURBOCHARGER DELIVER MORE AIR INTO THE ENGINE?

- Compressor Inlet: Opening through which ambient air passes before entering the compressor. (1)
- (2) Compressor Discharge: Ambient air is then compressed which raises the air's density (mass/unit volume).
- Charge Air Cooler (aka Intercooler): cools the compressed air to increase its density and to increase resistance to (3) detonation
- (4) power for a given displacement.
- Exhaust Manifold: Directs burned fuel and exhaust gasses from the cylinders towards the turbine. (5)
- Turbine Inlet: Directs high temperature exhaust gas towards the turbine wheel. The turbine creates backpressure on the (6) engine which means engine exhaust pressure is higher than atmospheric pressure.
- Turbine Discharge: A pressure and temperature drop occurs (expansion) across the turbine, which harnesses the exhaust (7) gas' energy to provide the power necessary to drive the compressor wheel.

### **COMPONENTS OF A TURBOCHARGER**

### **HOW A TURBO SYSTEM WORKS**

Intake Manifold: Directs dense air into the engine's cylinders. Each cylinder draws in an increased mass flow rate of air. Higher air mass flow rate allows a higher fuel flow rate (with similar air/fuel ratio). Combusting more fuel results in more

Ball bearing innovation began as a result of work with the Garrett Motorsports group for several racing series where it received the term the "cartridge ball bearing". The cartridge is a single sleeve system that contains a set of angular contact ball bearings on either end, whereas the traditional bearing system contains a set of journal bearings and a thrust bearing.

**Turbo Response -** When driving a vehicle with the cartridge ball bearing turbocharger, you will find exceptionally crisp and strong throttle response. Garrett Ball Bearing turbochargers spool up 15% faster than traditional journal bearings. This produces an improved response that can be converted to quicker 0-60 mph speed. In fact, some professional drivers of Garrett ball-bearing turbocharged engines report they feel like they are driving a large, normally aspirated engine.

Reduced Oil Flow - The ball bearing design reduces the required amount of oil required to provide adequate lubrication. This lower oil volume reduces the chance for seal leakage. Also, the ball bearing is more tolerant of marginal lube conditions, and diminishes the possibility of turbocharger failure on cold start conditions. Read more at www.GarrettMotion.com

Improved Rotordynamics and Durability - The ball bearing cartridge gives better damping and control over shaft motion, increasing reliability for both every day and extreme driving conditions. In addition, the opposed angular contact bearing cartridge eliminates the need for the thrust bearing, a common weak link in the turbo bearing system.

### WHEEL TRIM

Trim is a common term used when talking about or describing turbochargers. For example, you may hear someone say "I have a GTXxxxx". What is trim? Trim is a term used to express the relationship between the inducer and exducer of both turbine and compressor wheels. More accurately, it is an area ratio. Based on aerodynamics and air entry paths, the inducer for a compressor wheel is the smaller diameter. For turbine wheels, the inducer is the larger diameter.

The trim of a wheel, whether compressor or turbine, affects performance by shifting the airflow capacity. All other factors held constant, a higher trim wheel will flow more than a smaller trim wheel. However, it is important to note that very often all other factors are not held constant. So just because a wheel is a larger trim does not necessarily mean that it will flow more. Compressor Trim = (Inducer<sup>2</sup> / Exducer<sup>2</sup>) x 100 Turbine Trim= (Exducer<sup>2</sup> / Inducer<sup>2</sup>) x 100

Garrett ADVANCING MOTION

The compressor map describes each compressor's performance characteristics, including efficiency, mass flow rate, turbo speed, choke line, surge line, and pressure ratio. Below is a figure that identifies these aspects.

Efficiency Islands: Efficiency Islands are concentric regions that represent the compressor efficiency at any point on the map. The smallest island near the center of the map is the highest or peak efficiency island. As the rings move out from there, the efficiency drops by the indicated amount until the surge and choke limits are reached.

Mass Flow Rate: Mass Flow Rate is the mass of air flowing through a compressor over period of time and is expressed as lb/min. As a very general rule, turbocharged gasoline engines generate 10.0-11.0\* horsepower at the flywheel for each lb/min of airflow. So, an engine with a target peak horsepower of 400 Hp will require 36-40 lb/min of airflow to achieve that target. Many people use Volumetric Flow Rate (expressed in cubic feet per minute, CFM or ft3/min) instead of mass flow rate. Volumetric flow rate can be converted to mass flow by multiplying by the air density. Air density at sea level is 0.076lb/ft3. Mass flow can be physically measured, but in many cases it is sufficient to estimate the mass flow when choosing the proper turbo.

Turbo Speed: Turbo Speed Lines are constant turbo speed measured in RPM. As turbo speed increases, the pressure ratio and mass flow increases. Turbo speed lines are very close together at the far right edge of the map indicating a potential turbo over-speed condition.

Choke Line: The Choke Line is the right hand boundary of the compressor map and defined at the point where the efficiency drops below 58%. In addition to the rapid drop of compressor efficiency past this point, turbo speed also approaches or exceeds the recommended limit. If your actual or predicted operation is beyond this limit, a larger compressor is necessary.

Surge Line: Surge is the left hand boundary of the compressor map and represents a region of flow instability. This region is characterized by mild flutter to wildly fluctuating boost from the compressor. Continued operation within this region can lead to premature turbo failure due to heavy thrust loading. Surge will decay once the turbo speed finally slows enough to reduce the boost and move the operating point back into the stable region. This situation is commonly addressed by using a Blow-Off Valve (BOV) or bypass valve. A BOV functions to vent intake pressure to atmosphere so that the mass flow ramps down smoothly, keeping the compressor out of surge. In the case of a recirculating bypass valve, the airflow is recirculated back to the compressor inlet.

#### Pressure Ratio: IIc=

Where. Пс – Pressure Ratio  $P_{2c}$  = Absolute Outlet Pressure  $P_{1c}$  = Absolute Inlet Pressure

Absolute Pressure: It is important to use units of Absolute Pressure for both P2c and P1c. Absolute Pressure at sea level is 14.7 PSIa. In units of PSIa, the "a" refers to "absolute". This is referred to as standard atmospheric pressure at standard conditions.

Gauge Pressure: Measures the pressure above atmospheric, so a gauge pressure reading at atmospheric conditions will read zero. Boost gauges measure the manifold pressure relative to atmospheric pressure, and thus are measuring Gauge Pressure. In units of PSIg, the "g" refers to "gauge". This is important when determining P2c.

**Calculating P**<sub>2</sub>: For example, a reading of 12 PSIg on a boost gauge means that the air pressure in the manifold is 12 PSI above atmospheric pressure. For standard atmospheric conditions, 12 PSIg + 14.7 PSIa = 26.7 PSI absolute compressor outlet pressure (P2c). The pressure ratio at this condition can now be calculated: 26.7 / 14.7 = 1.82

Depression: A pressure loss upstream of the compressor caused by any restriction from the air filter or restrictive ducting. Depression can be 1 PSIg or more on some intake systems. In determining pressure ratio, the absolute pressure at the compressor inlet (P1c) is often LESS than the ambient pressure, especially at high load. Taking into account the 1 psig intake depression, the pressure ratio is now: (12 psig + 14.7 PSIa) / 13.7 PSIa = 1.95

Elevation: Higher elevations can have a significant effect on pressure ratio. Turbo speed increases to compensate for increases in altitude. Substitute the actual atmospheric pressure in place of the 14.7 psi in the equations above to give a more accurate calculation. For example, at Denver's 5000 feet elevation, the atmospheric pressure is typically around 12.4 psia. In this case, the pressure ratio calculation, taking into account the intake depression, is: (12 psig + 12.4 psia) / (12.4 psia - 1 psig) = 2.14 Compared to the 1.82 pressure ratio calculated originally, this is a big difference.

\* Performance results of this product are highly dependent upon your vehicle's modifications and tuning/calibration. Horsepower numbers represented in this catalog are calculated based strictly on choke flow of the compressor map (total turbo capability). which represents the potential flywheel horsepower.

### HOW TO READ A COMPRESSOR MAP

### WHAT IS A/R?

A/R (Area/Radius) describes a geometric characteristic of all compressor and turbine housings. It is defined as the inlet (or, for compressor housings, the discharge) cross-sectional area divided by the radius from the turbo centerline to the centroid of that area.

**Compressor A/R** - Compressor performance is comparatively insensitive to changes in A/R. Larger A/R housings are sometimes used to optimize performance of low boost applications, and smaller A/R are used for high boost applications. However, as this influence of A/R on compressor performance is minor, there are rarely A/R options available for compressor housings.

Turbine A/R - Turbine performance is greatly affected by changing the A/R of the housing. Using a smaller A/R will increase the exhaust gas velocity into the turbine wheel providing increased turbine power at lower engine speeds and resulting in quicker boost response. The smaller A/R also causes the flow to enter the wheel more tangentially, which reduces the ultimate flow capacity of the turbine wheel. This will increase exhaust backpressure and reduce the engine's ability to breathe effectively at high RPM, adversely affecting peak engine power.

Using a larger A/R will lower exhaust gas velocity, and delay boost response. The flow in a larger A/R housing enters the wheel in a more radial fashion, increasing the wheel's effective flow capacity, resulting in lower backpressure and more power at higher engine speeds.

When deciding between A/R options, be realistic with the intended vehicle use and choose the A/R to bias the performance toward the desired powerband characteristic.

### HOW DO I CHOOSE THE RIGHT TURBO

The primary input in determining which turbocharger is appropriate is to have a target horsepower in mind. This should be as realistic as possible for the application. Remember that engine power is generally proportional to air and fuel flow. Once you have a target horsepower identified along with your engine displacement, you begin to hone in on the turbocharger size, which is highly dependent on airflow requirements.

Other important factors include the type of application. An autocross car, for example, requires rapid boost response. A smaller turbocharger or smaller turbine housing would be most suitable for this application. While this will trade off ultimate power due to increased exhaust backpressure at higher engine speeds, boost response of the small turbo will be excellent. Alternatively, on a car dedicated to track days, peak horsepower is a higher priority than low-end torque. Plus, engine speeds tend to be consistently higher. Here, a larger turbocharger or turbine housing will provide reduced backpressure but less-immediate low-end response. This is a welcome tradeoff given the intended operating conditions.

Selecting the turbocharger for your application goes beyond "how much boost" you want to run. Defining your target power level and the primary use for the application are the first steps in enabling your Performance Distributor to select the right turbocharger for you.

To find your local Performance Distributor visit: GarrettMotion.com/Racing-and-Performance/Distributor-Locator/

	Engine lacks power	Blacksmoke	Excessive oil consumption	Blue smoke	Noise	Excessive oil - compressor end	Excessivie oil - turbine end	Drag or bind in rotating assembly	Excessive rotating assembly play	Damaged compressor wheel	Damaged turbine wheel	Probable cause     Not a probable cause
POSSIBLE CAUSES												SOLUTION
Dirty air cleaner element	•	•		•	•	•						Clean or replace filter element
Plugged crankcase breathers			•		1	•	•					Clear obstruction per manufacturer's manual
Air cleaner element missing, leaking, or loose connections to turbo					•			•		•		Replace, repair or reconnect air cleaner element per manufacturer's manual
Collapsed or restricted air pipe before turbocharger	•	•		•	•	•						Inspect pipe for damaged or obstruction, replace or repair
Restricted or damaged crossover pipe - turbo to inlet manifold	•	•			•	•						Inspect pipe for damaged or obstruction, replace or repair
Foreign object between cleaner and turbocharger	•	•			•	•		•	•	•		Inspect air intake piping, remove foreign object
Foreign object in exhaust system (check engine)	•	•			•		•	•	•	1	•	Inspect exhaust piping only when engine is not running and cold, remove foreign object
Turbocharger flanges, clamp or bolts loose	•	•	•	•	•	•	•	•	•	•	•	Inspect all connecting hardware for damage, ensure tight fits per installation instructions
Inlet manifold cracked, gaskets, loose or missing, connections loose	•	•		•	•	•						Remove and inspect inlet manifold for damage to castings and gaskets, replace if needed
Exhaust manifold cracked, burned, gasket loose, blown or missing	•	•			•							Remove exhaust manifold only when engine is cold and not running and inspect for damage to castings and gaskets, replace if needed
Restricted exhaust system					•							Inspect exhaust system only when engine is cold, not running, remove obstruction
Oil lag at start-up								•	•			Inspect lubrication system lines, filters and oil for obstruction, remove obstruction
Insufficient lubrication								•	•			Inspect lubrication system lines, filters and oil for obstruction, remove obstruction
Lubricating oil contaminated with dirt or other material								•	•			Replace all filters and lubricating oil with new per manufacturer's manual
Improper lubricating oil type used								•	•			Replace lubricating oil with correct grade
Restricted oil feed line						•	•	•	•			Remove and inspect oil line, remove obstruction
Restricted oil drain line			•				•					Remove and inspect oil line, remove obstruction
Turbine housing damaged Or restricted	•	•			•						•	Remove turbine housing, inspect for cracks or wear, replace if needed
Turbocharger seal leakage			•	•		•	•					Inspect for proper oil feed / drain line installation. Contact Garrett distributor for rebuild
Worn journal bearings	•	•	•		•	•	•	•	•	•	•	Contact a Garrett performance distributor or Garrett master distributor
Excessive dirt build-up behind turbine wheel	•	•		•	•	•		•		•	•	Inspect air cleaner element and intake piping for damage or leaks, replace if needed. Clean compressor wheel and housing
Excessive carbon build-up behind compressor housing	•	•		•	•		•	•		1	•	Inspect crankcase ventilation
Too fast acceleration at initial start									•	•		Decrease acceleration at initial start
Too little warm-up time									•	•		Extend warm-up period
Fuel pump malfunction	•	•										Refer to engine manufacturer's manual and replace if needed
Worn or damaged injectors	•	•										Inspect injectors for damage and replace if needed
Valve timing	•	•										Refer to engine manufacturer's manual and replace if needed
Burned valves	•	•										Refer to engine manufacturer's manual and replace if needed
Worn piston rings	•	•										Refer to engine manufacturer's manual and replace if needed
Burned pistons								•	•			Refer to engine manufacturer's manual and replace if needed
Leaking oil feed line				•			•					Remove and inspect oil line, remove obstruction
Excessive engine pre-oil			•	•		•	•					Refer to engine manufacturer's manual and replace if needed
Excessive engine idle			•	•			•	•		1	•	Refer to engine manufacturer's manual and replace if needed
Coked or sludged center housing									•			Contact a Garrett performance distributor or Garrett master distributor
Oil pump malfunction			•	•		•	•	•	•	•	•	Refer to engine manufacturer's manual and replace if needed
Oil filter plugged	•	•	•	•	•							Refer to engine manufacturer's manual and replace if needed
Oil bath cleaner: air inlet screen restricted / dirty air cleaner	•	•		•	•							Replace air inlet screen
Oil bath air cleaner: oil pull-over / oil viscosity too low or high	•	•		•	•							Replace lubricating oil with correct grade
Boost control malfunction: wastegate	•	•	•	•	•	•	•		•	•	•	Inspect for damage, leaks or obstructions; replace or repair if needed
Boost control malfunction: vnt	•	•	•	•	•	•	•		•	•	•	Contact a Garrett performance distributor or Garrett master distributor
Boost control malfunction: engine management system	•	•	•	•	•	•	•		•	•	•	Refer to manufacturer's manual and adjust as needed

Nearly all turbocharger-related problems are the result of a handful of causes. Knowing how to recognize the symptoms of these issues early and link them with causes will help you save downtime and money. The chart above outlines the probable causes and noticeable conditions of the most common turbocharger maladies as well as what you can do to solve them. If a problem falls outside of your mechanical comfort level, contact a Performance Distributor or a Master Distributor for assistance. www.GarrettMotion.com/Racing-and-Performance/Distributor-Locator/

### TROUBLESHOOTING

Garrett

ADVANCING MOTIO

# **G**SERIES

Garrett G Series turbochargers feature the latest innovations in turbocharger technology. This clean sheet product has our highest performing compressor and turbine aero to date. Countless engineering hours have been spent to create the perfect blend of efficiency and performance in a compact package. Advanced features tailored to meet the demands of hard core competitors making G Series the most powerful turbochargers on the market.

LYFE Motorsport | 1st Place Super Lap Battle COTA | 2:07.181

### **A TURN AHEAD OF THE COMPETITION**

### INTERNALLY WASTEGATED

G25-660. These turbochargers come fully assembled and calibrated by Garrett to 1.0 bar (14.7 PSI)

### **TWIN PISTON RINGS**

on both sides of the shaft combined with a new oil deflector help reduce oil leakage from the center housing to the compressor and turbine stage.

### **BEARING CARTRIDGE**

new compact cartridge features ceramic ball bearings resulting in less heat transfer to the oil. Steel bearing cages improve the durability of complete assembly.

### COMPRESSOR WHEEL

forged fully machined with improved aero flows up to 15-30% more air. Lightweight construction and CFD designed and manufactured by Garrett engineers.

### Garrett G25-550

Horsepower: 300 - 550 Displacement: 1.4L - 3.0L

### COMPRESSOR MAP

LIS ACLIGATER

# **GTX SERIES**

Garrett GTX Series turbochargers are designed specifically for the hard-core enthusiast who wants optimal performance. The forged fully-machined billet aluminum compressor wheels feature next generation aerodynamics that provides a larger horsepower range and maximize boost response. Ported shroud compressor housings increase surge resistance and provide reliable, continuous power throughout the power band.

A dual ceramic ball bearing cartridge prolongs the lifespan and improves shaft balance. The water cooled CHRA keeps housing temperatures to a minimum. The turbine wheel is constructed from Inconel, a super alloy that maintains strength during prolonged exposure to high exhaust gas temperatures.

Turbine kits are offered in open volute and twin scroll, and a variety of A/R and flange configurations. GTX Series turbochargers are used by today's top motorsports teams and are ready to boost you to the podium or wherever your destination may be.

### GTX5544R GEN II

Horsepower: 1400- 2850 Displacement: 3.0L - 12.0L Comp: 102mm, 106mm

GEN II aerodynamics feature increased horsepower range New fully machined speed sensor port

Improved ported shroud design for surge resistance Lightweight billet backplate

SFI certified super core and turbine options available

V-Band compressor outlet configuration

Available in 85mm, 88mm, 91mm, 94mm, 98mm, 102mm, 106mm

Features:

1.24 A/R and 1.40 A/R options

SFI certification optional

3/8" grade 5 cross bolts on both SFI and non-SFI long outlet housings Threaded bosses for attachment points

4.25" V-Band inlet

5" V-Band outlet

Compatible with GTX5533R GEN I & GEN II | GTX5544R

Long and short outlet configurations

SIRIERI I

# **GT SERIES**

Garrett GT Series is the name that pioneered turbo technology and boosted drag racing and road racing teams to break hundreds of world records. The GT Series lineup is offered in both journal and ball bearing options, with sizes ranging from GT2052 to GT3582.

The cast compressor wheels feature original GT Series aerodynamics and provide maximum durability and longevity. Internally wastegated turbine housing options are available in all GT Series sizes.

Turbine kits are offered in open volute and twin scroll, and a variety of A/R and flange configurations. For any performance need, GT Series turbochargers have you covered.

Nick Apex | Garrett GT2052 | Street Freestyle

### Garrett GT2052

Horsepower: 140 - 230 Displacement: 1.4L - 2.0L

![](_page_32_Picture_1.jpeg)

Speed Sensors: Select Garrett turbochargers come standard with a fully machined speed sensor port. Just remove the bolt and screw in the appropriate kit for your application. GT and GTX Gen I turbos can be machined by a shop of your choice to retrofit the speed sensor port. G Series turbochargers utilize a new and easy to install sensor that does not need to be calibrated. GT/GTX speed sensor kits not applicable with G Series turbochargers.

Street Kit Components: sensor, bolt, speed sensor harness, speed sensor gauge kit.

G Series / GTX55 Gen II / GTX50 Gen II : 781328-0003 GTX Gen I / GTX Gen II / GT Models: 781328-0001

#### Maximum Performance

Comparing boost levels and shaft speed on a compressor map, you can determine the ideal operating conditions to insure peak power over a wider operating range. All Garrett Turbocharger Speed Sensor Kits are compatible with data loggers to enhance engine tuning capability. In addition, the Garrett-branded gauge's maximum speed recall function will retain the highest wheel speed for five minutes for easy mapping. The data gained from the Garrett Turbocharger Speed Sensor Kit can be used to closely estimate the engine's flow behavior without a flow bench. Flow information is invaluable for determining if the turbocharger is reaching its maximum performance, for validating the turbo match, and for insuring that it is not overspeeding, allowing you to avoid potentially damaging operating conditions. This kit could even be used in conjunction with an aftermarket ECU to limit compressor speed. The Garrett Turbocharger Speed Sensor Kit will help you be sure you've got the correct turbo for your needs!

#### Easy To Use

The Garrett Turbocharger Speed Sensor works with any turbocharger to accurately determine compressor wheel speed. The instructions include detailed drawings of the exact machining specifications for all Garrett GT and GTX Gen I catalog turbochargers as well as general guidelines for other compressor housing types. G Series / GTX55 Gen II / and GTX50 Gen II turbochargers use a new sensor that eliminates the calibration process. The Garrett Turbocharger Speed Sensor Kit includes all necessary wiring for easy installation and simple data logging.

![](_page_32_Picture_9.jpeg)

Adjustable Wastegate Bracket Part Number: 773151-0002

The Garrett Adjustable Wastegate Bracket allows for a greater range of motion to set up the compressor outlet and wastegate can. The bracket also allows for redirection of the actuator to keep vacuum lines away from heat or sharp edges. The adjustable actuator bracket is available for use on GT25R, GT28R and GT30R turbochargers.

Pro Kit Components: sensor, bolt, speed sensor harness.

G Series / GTX55 Gen II / GTX50 Gen II : 781328-0004

Boost Gauge: The Garrett Mechanical Boost Gauge is the perfect addition to your interior for the important job of accurately monitoring your boost levels. The gauge has a sleek design and features a black face, white backlit numbers and a brushed aluminum ring. The gauge monitors boost from 30 Hg of vacuum to 30 psi of boost and is available in PSI and BAR configurations.

Boost Gauge Components: gauge, mounting bracket, hose, fitting, mounting hardware. Boost Gauge PSI Part Number: 773326-0001 Boost Gauge BAR Part Number: 773326-0002

Divided Vband Inlet Adapter: The Garrett divided V-band adapter is for enthusiasts that are fabricating divided exhaust manifolds. This adapter mates perfectly with GT/GTX 30 and 35 divided Vband turbine housings and has two 2" recessed orifices that feed into the flange Turbine Inlet Divided V-Band Adapter: Compatible with GT/ GTX 30 & 35 divided turbine housings. Vband Adapter Part Number: 813444-0001

Vband Turbine Outlet Adapter: The Garrett V-band outlet adapter is for fabricating the turbo down pipe. This adapter mates perfectly with the GT/GTX 30, 35, and G25 turbine housing outlet. It has a 3" recessed opening feeding the flange. Vband Adapter Part Number: 774175-0001

Actuator Kits: Garrett actuator kits are for use on internally wastegated turbine housings. These kits are designed to regulate shaft speed by venting exhaust gas out of the turbine housing.

#### Important product information:

Garrett Performance Kits are professional aftermarket products only designed for certain racing vehicles driven on particular racing tracks and shall only be used on racing vehicles that will never be driven on public roads or highways. Garrett Performance Kits are not legal for use in vehicles on public roads or other roads to which public road law applies. Any vehicle modifications using Garrett Performance Kits are AT YOUR OWN RESPONSIBILITY and AT YOUR OWN RISK. Only use Garrett Performance Kits in compliance with all applicable laws, regulations and ordinances (including but not limited to emission, noise, operating license, performance, safety and type-approval aspects). A vehicle modification using Garrett Performance Kits may particularly affect or void a vehicle's warranty, operating license or type-approval. Moreover, only use Garrett Performance Kits in compliance with all applicable racing and racing track provisions. It is YOUR OWN RESPONSIBILITY AND RISK to ensure that your Garrett Performance Kit fits your vehicle and area of application. YOU MUST ENSURE LAWFUL AND SAFE OPERATIONS AT ANY TIME. You should particularly consult the owner's manual and service manual of your vehicle. You should also contact your vehicle's manufacturer to determine what effects modifications may have on important aspects such as safety, warranty, performance, etc. Only install and use Garrett Performance Kits if you have fully read and understood this important safety information and if you fully agree with the terms and conditions set forth therein.

**TURBO UPGRADE FOR 2007-2016 MITSUBISHI EVO** 

![](_page_34_Picture_1.jpeg)

![](_page_34_Picture_2.jpeg)

#### MITSUBISHI EVO X TURBO UPGRADE Bolt-on Upgrade Kit Evo X 0.73 A/R GTX3071R Stage 1 Part Number: 788550-5005s (550hp\*) Evo X 0.94 A/R GTX3076R Stage 2 Part Number: 788550-5008s (650hp\*)

Garrett

The Garrett Evo X Turbo Upgrade allows you to push your AWD, rally-bred monster up to an estimated 550 HP with the Garrett GTX3071R or a tire-smoking estimated 650 HP with the Garrett GTX3076R. Each turbo has been meticulously designed to be a bolt-on upgrade with no major modifications or guesswork required. The Garrett Evo X Turbo Upgrade features a specially designed twin-scroll turbine housing that mates to the Evo X's stock exhaust manifold as well as the stock exhaust down pipe to allow for aftermarket exhausts to be used without worrying about fitment.

The turbine housing allows for the retention of the stock exhaust heat shield for better temperature control as well as a stealth look. The ported shroud compressor housing reduces the occurrence of surge during operation and mates directly to the intake piping as well as the stock outlet position. Garrett patented dual ball bearing center housing is standard on both turbocharger options for unmatched power handling and unbeatable response.

7.3L Power Stroke

#### 7.3L Power Stroke Part Number 739619-5004s (590HP\*)

Applications: 1999.5 - 2003 7.3L Ford F250, F350 & Excursion The GTP38R turbocharger contains an exclusive ball bearing cartridge for unbeatable response, efficiency, and durability. Elimination of the thrust bearing eliminates Failures at elevated boost levels. The 88mm GT compressor wheel provides 33% more flow than the stock 80mm wheel. A ported shroud housing improves compressor flow range for surge control. The kit includes a 1.00 A/R turbine housing for free flowing exhaust with reduced back pressure and up to 200° F reduction in exhaust gas temperature. Maximum recommended boost level is 40psi.

### 6.0L Power Stroke

#### Part Number 777469-5002S (560HP\*) Applications: 2003 Ford F-Series & Excursion Power Stroke 6.0L Part Number 772441-5002S (560HP\*) Applications: 2004-2007 Ford F250, F350 & Excursion Power Stroke 6.0L

The GT3788VA Turbocharger features the Garrett patented Advanced Variable Nozzle. Turbine AVNT™ design for increased compressor flow and boost response. Utilizes nine movable vanes which significantly increase turbine efficiency and improve engine performance from idle launch through peak torgue. Patented integral electro-hydraulic actuation and proportional solenoid for infinitely variable control. Larger compressor wheel over stock increases maximum power range while keeping turbo speeds down for the same power output. Outline interchangeable for a perfect fit each and every time.

POWERMAX<sup>™</sup> TURBO UPGRADE FOR 2011-2015 FORD RANGER | MAZDA BT-50

![](_page_36_Picture_2.jpeg)

### PowerMax<sup>™</sup> Turbocharger Upgrade

#### Part Number 880862-5001W

#### Applications: Direct Replacement for 2011-2015 Ford Ranger PX | 2011 Mazda BT-50 Supports up to 172W\*

This Garrett PowerMax™ direct fit turbocharger is designed for the 3.2L Duratorg 5 cylinder diesel engine platform found in the 2011-2015 Ford Ranger PX and the 2011-Mazda BT-50. The forged, fully machined compressor wheel designed for the GTX Gen II product line increases flow by 20% over the OE wheel. With the correct engine calibration, this enables the engine to be tuned up to 172kW from OE standard 14 7kW. All Garrett PowerMax™ direct fit turbochargers are outline interchangeable with the OE turbocharger ensuring a perfect fit every time.

Features:

#### \*Please refer to the legal notice on page 58 before purchasing this product.

### Compressor Map Comparison OE vs Garrett Stage 1 Upgrade

- GTX Gen II compressor wheel aerodynamics
- Wider compressor map for improved performance
- 20% more flow than the OE turbocharger

#### PowerMax<sup>™</sup> Turbocharger Upgrade Part Number 881604-5001S Applications: Direct replacement for 2007-2018 Toyota Land Cruiser 4.5L 1 VD-FTV turbo diesel

#### Supports up to 164kW\*

This Garrett PowerMax™ direct fit turbocharger is designed for the 4.5L 1 VD-FTV VS diesel engine platform found in the 2007-2018 Toyota Land Cruiser. The forged, fully machined compressor wheel designed for the G Series product line increases flow by 20% over the OE wheel. Performance results of this product are highly dependent upon your vehicle's modifications and tuning. The power represented above was recorded on a chassis dyno with a modified ECU and OEM fuel delivery system enabling the engine to produce 164kW from the OE standard 151kW. All Garrett PowerMax™ direct fit turbochargers are outline interchangeable with the OE turbocharger ensuring a perfect fit every time.

POWERMAX™ TURBO UPGRADE FOR F-150 | EXPEDITION | NAVIGATOR 3.5L (2011 - 2017)

![](_page_37_Picture_2.jpeg)

![](_page_37_Picture_3.jpeg)

### PowerMax<sup>™</sup> Turbocharger Upgrade Part Numbers 881027-5001S | 881028-5001S | 881027-5002S | 881027-5002S

Applications: Direct Replacement for F-150 | Expedition | Navigator 3.5L (2011 - 2017)

This Garrett PowerMax<sup>™</sup> turbocharger upgrade for the Ford 3.5L EcoBoost engine platform is engineered to increase engine performance capability while maintaining OEM installation specifications. This direct drop-in stage 1 upgrade provides 22% more flow than OEM and will support up to 300HP\* from each turbo. Improvements in efficiency and flow can be attributed to the light weight forged fully-machined compressor wheel. Boost response of this PowerMax turbocharger compared to OEM has not been tested. This turbocharger kit comes fully assembled and calibrated and is outline interchangeable with the OE hardware to ensure a perfect fit every time.

### INTERCOOLER CORES AND VEHICLE SPECIFIC APPLICATIONS

### CHARGE AIR COOLERS

Utilizing advanced Aerospace technology, Garrett intercoolers offer superior fatigue protection for the high boost pressures and temperatures of today's extreme engines. With over 75 years of charge air cooler experience, Garrett remains ahead of the industry in intercooler design and function making it the number one choice for some of the premier names in the performance car industry - Roush, Saleen, Mercedes-Benz AMG, Ford SVT, GM, and McLaren have all turned to Garrett to intercool their hottest models.

We now offer this expertise and quality to enthusiasts, in a full range of intercooler cores that are manufactured in-house by Garrett technicians. The bar and plate construction offers hi-performance, in a compact design using high strength vacuum brazed aluminum alloys with advanced fin designs to ensure greater heat transfer effectiveness and durability. From air-to-air cores sized for sport compact cars to air-to-water cores capable of supporting 1000+ hp, we can provide optimum performance for nearly any application.

Garrett Garrett PERFORMANCE INTERCOOLER FOR 2015+ 2.3L FORD MUSTANG ADVANCING MOTION ADVANCING MOTIO m

DIRECT FIT PERFORMANCE INTERCOOLER FOR 2015+ 2.3L FORD MUSTANG SUPPORTS UP TO 600 HORSEPOWER C.A.R.B. CERTIFIED 🗸

SUPPORTS UP TO 750 HORSEPOWER C.A.R.B. CERTIFIED 🏑

![](_page_39_Picture_3.jpeg)

#### Part Number: 857564-6001

The Garrett Direct Fit Performance Intercooler is C.A.R.B. certified (EO# D-794) and fits the 2015+ 2.3L Ecoboost Mustang in the stock location and can support up to 600 horsepower. The aluminum core features advanced offset fin design and vacuum brazed bar-and-plate construction resulting in superior thermal and fatigue performance. CFD optimized cast aluminum end tanks reduces recirculation and maximizes flow. The complete assembly results in up to a 30% reduction in pressure drop and up to a 40 °F reduction in charge air temperature.

This direct fit performance intercooler installs in 2.5 hours and reuses the stock bolts, hoses, and clamps. Removal of the OE grill shutters required. For more information including Installation instructions please visit our website: www.garrettmotion.com/racing-and-performance/performance-catalog/intercoolers/

For more information including Installation instructions please visit our website: www.garrettmotion.com/racing-and-performance/performance-catalog/intercoolers/

Features:

- Supports up to 499 kW
- 218% larger core than stock
- Installs in stock location
- Cast aluminum end tanks •
- Advanced offset fin design
- Bar-and-plate construction

Part Nu	mber	881649-6001			
	Make	Ford   Mazda			
Vehicle	Model	Ranger/Raptor/ Everest/BT50			
	Year	2011-2020			
Engine	Туре	3.2L   2.2L   2.0L			
Engine	Fuel	Diesel			
Weight	12.56 kg				
Size Specs	680mm x 101mm x 260mm

#### Part Number: 888883-6001 | 888883-6002

Garrett Powermax™ direct fit performance charge air cooler for the 2015+ BMW M3 and M4 boasts a 47% larger core with dual pass coolant flow to help reduce intake manifold temperatures by an average of 10 °F. CFD optimized end tanks improve airflow through the core. An average increase of 12.4 horsepower and 4.9 lb-ft of torque were measured during back to back dyno pulls. This direct-fit performance intercooler installs in 1.5 hours and reuses the stock bolts, hoses, and clamps.

Features:

- Supports up to 980 HP
- 47% larger core than stock
- Installs in stock location
- Cast aluminum end tanks
- Air-to-water design
- Bar-and-plate construction
- Aluminum finish coming Q1 2020

### PERFORMANCE INTERCOOLER FOR 2016+ HONDA CIVIC 1.5T / SI

![](_page_42_Picture_2.jpeg)

DIRECT FIT PERFORMANCE INTERCOOLER FOR 2016+ HONDA CIVIC 1.5T / SI SUPPORTS UP TO 660 HORSEPOWER

![](_page_42_Picture_4.jpeg)

#### Part Number: 893516-6001

Garrett Powermax™ direct fit performance charge air cooler for the 2016+ Honda Civic 1.5T/SI has a 90% larger core than stock and helps reduce intake manifold temperatures up to 60 °F (15.6 °C) at heat soak. CFD optimized end tanks improve air flow distribution through the core. This performance intercooler showed a max increase of up to 17 WHP (12.7 kW) and 14 lb-ft of torque (19 N-m) compared to OE during back to back dyno comparisons in a wind tunnel which generates air velocity that matches vehicle speed.

This direct fit performance intercooler installs in 3 hours and reuses the stock bolts, hoses, and clamps. Some modification to the shroud required. For more information including Installation instructions please visit www.garrettmotion.com/racing-andperformance/performance-catalog/intercoolers/

#### Features:

- Supports up to 660 HP (492 kW)
- 90% larger core than stock
- Installs in stock location
- Max increase of 17 HP (12.7 kW) and 14lb-ft (19 N-m)
- Up to 60 °F (15.6 °C) reduction in intake temp
- Cast aluminum end tanks
- Advanced offset fin design
- Bar-and-plate construction

### **Turbo PN**

Internally wastegated options fully assembled and calibrated by Garrett. Gasket kit included. Models: G25-550, G25-660, GT2252, GT2554R, GT2560R, GT2860R, GT2860RS, GT2871R

### **Assembly Kit PN**

Externally wastegated options include super core and turbine housing kit in separate boxes. Gasket kit included. Tools and assembly required to connect the super core to the turbine housing. Models: Gen II GTX28, GTX30, GTX35, G25-550, G25-660

### **Super Core PN**

Super Core refers to a center housing rotating assembly with compressor housing attached. Gasket kit included. Turbine housing kit purchased separately. Models: GT30, GT35, GTW34, GTW36, GTW38, GTX40, GTX42, GTX45, GTX47, GTX50, GTX55

### **Turbine Kit PN**

Individually packaged exhaust housings. Connections and size vary between models. Gasket kit included. Reverse Rotation housings not interchangeable with standard rotation. GT and GTX housings are interchangeable within frame family. (e.g., GT30 - GTX30). G Series housings are NOT interchangeable with GT, GTX, GTW. GTW housings are NOT interchangeable with GT, GTX, G Series. Some options may require modifications to the exhaust system to

### **Terms and Conditions**

Garrett, the Garrett Advancing Motion logo, and all product names appearing on our Web sites are among the trademarks and/or service marks owned by Garrett Transportation I Inc., a subsidiary of Garrett Motion Inc. No trademark or service mark or other license is granted in connection with the materials contained on any Garrett Motion Web site.

Nothing contained herein shall be construed as conferring by implication, estoppel or otherwise any license to any patent, trademark or other intellectual property right of Garrett Motion Inc. or any third party. Garrett Motion Inc. makes no representations or warranties that any use of the information contained on this Web site will not infringe any such patent, trademark or other intellectual property right of Garrett Motion Inc. or any third party. Should you view the Garrett Motion Inc. Web site and respond with information (excluding personal information, which is addressed under the Internet Privacy Policy) including questions, comments or suggestions regarding the content of the Garrett Motion Inc. Web site, such information shall be deemed to be non-confidential and Garrett Motion Inc. shall have no obligation of any kind with respect to such information and shall be free to reproduce, use, disclose and distribute the information to others without limitation. Garrett Motion Inc. shall be free to use any ideas, concepts, know-how or techniques contained in such information for any purpose whatsoever including but not limited to developing, manufacturing and marketing products incorporating such information.

Under no circumstances will Garrett Motion Inc. be liable to any person or business entity for any direct, indirect, special, incidental, consequential or other damages based on any use of this Web site or any other Web site to which the Garrett Motion Inc. Web site is linked, including, without limitation, any lost profits, business interruption, or loss of programs or information, even if Garrett Motion Inc. has been specifically advised of the possibility of such damages.

**Limited Warranty** Garrett Motion, Inc. warrants to the original purchaser of its Turbocharger Products that such Turbocharger Products will, for a period of 1 year from date of shipment and subject to the Limitations on Warranty, be free from defects in materials and workmanship. For approved warranty claims Garrett Motion, Inc. will, at its sole discretion, either credit the original purchaser in an amount equal to the original purchase price, or replace the applicable product free of charge, within 60 days of Garrett Motion, Inc. approval. This is the purchaser's sole and exclusive remedy and provides the complete financial responsibility of Garrett Motion, Inc. for a warranty claim. To be eligible for reimbursement, Customer must (a) submit all warranty claims to Garrett Motion, Inc. within 30 days of the discovery of the alleged product defect; and (b) complete and return a Returned Material Authorization Form. Consumers are required to work through a Garrett Motion distributor in order to process any warranty claims. When Garrett Motion, Inc. requires the examination of a failed part, Garrett Motion, Inc. will promptly notify Customer and will await receipt of the failed part before further processing the warranty claim. If Garrett Motion, Inc. ultimately determines that the failed part is covered under the Limited Warranty, Garrett motion, Inc. will reimburse Customer for the actual cost of ground shipment for any part found to be defective.

#### THIS IS GARRETT MOTION INC. SOLE WARRANTY. GARRETT MOTION INC. MAKES NO OTHER REPRESENTATIONS OR WARRANTIES, EITHER EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION THE IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

No representative or distributor of Garrett Motion Inc., has the authority to change or alter this warranty. This warranty may only be modified by an agreement signed by an authorized officer of Garrett Motion Inc.

We recommend that Garrett products be installed by a qualified automotive technician. If you have any doubts as to your ability to install our product, consult with a local automotive repair company. Please be sure to carefully read all of the attached instructions prior to starting the installation process. If you have any questions about the enclosed parts or the instructions, call the distributor that you purchased the kit from for clarification. **Prior to the Garrett product installation, be sure that the vehicle is parked on a level surface and the engine is cool. Engine fluids and components can be extremely hot following normal vehicle operation. Avoid direct contact of engine fluids or components with your skin which may cause personal injury.**

## COMPETITION IS IN OUR NATURE

**Farrett** 

And so are the races we've won, the records we've broken, and our Motorsport partnerships.
